INNOVATION SINCE 1877

From our home in Norway, Helly Hansen has been making professional grade gear that helps people stay and feel alive for the last 140 years.

In 1877, after many years at sea, Norwegian captain Helly Juell Hansen and his wife, Maren Margarethe, began producing oilskin jackets, trousers, sou'westers and tarpaulins, made from coarse linen soaked in linseed oil. Since then, the legacy of Helly Hansen lives on, developing and creating a long list of first-to-market innovations.

1949 HELOX - THE NEXT EVOLUTION IN WATERPROOF

Helox waterproof fabric featured a thin sheet of translucent PVC plastic that was sewn into coats to make them waterproof. It was revolutionary technology that became the must-have protection for outdoor use. With a production of 30,000 coats each month, the success was almost immediate and was used by the Norwegian delegation at the 1952 Olympic Games in Helsinki.

1961 FIBERPILE - THE TECHNICAL MIDALYER IS INVENTED

Helly Hansen partnered with Norwegian Fiber Pile Inc. and developed the original Fiberpile - the first fleece. It featured a high warmth to weight ration and maintained its thermal qualities even when wet, making it a favorite of lumberjacks and outdoor enthusiasts. The concept lives on and the modern version of Propile is still in production today.

1970 LIFA - THE BIRTH OF TECHNICAL BASE LAYER

HH's LIFA® revolutionized the industry with the introduction of the first technical base layers. LIFA® moves moisture away from the body allowing users to stay warm and comfortable. It has been used by professionals on every ocean, many of the world's tallest peaks and was included in Outside Magazine's list of The Most Influential Gear of All Time in 2012. LIFA® remains the cornerstone of what we believe is the best technical base layer available today.

1972

Helly Hansen launches PVC foam with closed cells for use in life jackets. The foam is the preferred flotation material 30 years later.

1984 HELLY TECH® - THE WATERPROOF AND BREATHABLE SOLUTION

Helly Tech® waterproof and breathable fabric was launched in the 1980's, winning awards and setting the new standard for performance and protection. It also provided the final layer for the 1986 introduction of the Helly Hansen 3-Layer System™, an industry - first program educating people on how to dress for the outdoors. Today, Helly Tech® fabrics are engineered to deliver the specific demands of professional skiers, sailors, and at workplaces around the world.

1990 PROWOOL - THE PERFECT BLEND OF LIFA® AND MERINO

The Prowool (renamed HH Lifa® Merino) base layer for cold weather conditions was launched in the late 90's, combining Lifa® Stay Warm Technology™ with Merino wool for both moisture transport and added warmth. Designed for professionals facing the coldest conditions it quickly became the go-to piece for performance, warmth and comfort in extreme environments.

2012 H'FLOW™ - A BETTER SOLUTION FOR TEMPERATURE REGULATION

Helly Hansen introduced the new H'FLOW™ Technology in 2012 with the H'FLOW™ Jacket, which won an Award for Design Excellence from the Norwegian Design Council. The patented H'FLOW™ Jacket features an airflow venting system and a protective barrier. It allows adventurers to efficiently regulate their body temperature.

2018 LIFA® MAX - OUR WARMEST BASE LAYER IN COLD CONDITIONS

Helly Hansen introduces its warmest base layer to date by thickening the already tried and tested Lifa® fibers to produce a warmer, lightweight and flexible garment. The enhanced, unrivaled warmth and comfort is why we believe Lifa® Max is the best technical base layer available today.

2019 LIFALOFT™

With increased warmth, lightweight insulation and superior moisture management properties, LifaLoft™ technology is an insulation revolution that will keep you warmer with less weight and bulk compared to traditional polyester insulation. Developed in cooperation with Primaloft®, LifaLoft™ is a combination of Lifa®'s unique insulation structure and Primaloft®'s extensive knowledge in synthetic insulation.

2022 BRZ - Climate Regulating Comfort

Helly Hansen Workwear launched BRZ. Designed to deliver climate regulating comfort and versatility, BRZ is a product construction bolstered by lightweight fabric and mechanical ventilation.

FOR THE PEOPLE

The textile and garment industry is made up of a complex supply chain stretched all over the globe. It covers industries such as chemical suppliers, garment manufacturers and cotton crops often situated in countries with weak social regulations.

Helly Hansen has been a member of the Norwegian Ethical Trade organization since 2003 and their main support goes to helping us map our supply chain and engage in projects which improve people's rights and fair payment. Additionally, we have a close relationship with a majority of our Tier 1 and Tier 2 suppliers. Cooperation based on trust and mutual respect has been a part of our core values since the founding of Helly Hansen in 1877.

Moreover, our manufacturing code of conduct, which is communicated and signed by all our Tier 1 and Tier 2 suppliers, is based on key UN and International Labor Organization conventions and documents. We perform social audits on a yearly basis with all our Tier 1 suppliers, including approved sub-contractors. However, to achieve economic and social progress, our main focus is on social dialogue projects. Social dialogue is an integral aspect of achieving workplace harmony, leading to a better organization and greater productivity.

WE SUMMARIZE OUR FOCUS FOR THE PEOPLE IN FOUR MAIN AREAS:

1. Building long-term relationships based on trust and mutual respect.
2. Manufacturing code of conduct communicated and signed by all Tier 1 suppliers, including sub-contractors.
3. Yearly social audits.
4. Enabling "social dialogue" in the workplace to strengthen workers' rights as well as performance and productivity.

Sustainability & Responsibility

Helly Hansen strongly believes that long term commercial success can only be achieved by respecting, protecting and promoting ethical values, human rights, labor rights and the environment. We continuously work to improve our policies and practices, enabling us and our suppliers to achieve the highest standard in terms of social and environmental values. We drive improvement for people, and for the planet, working towards making a positive impact on the lives we touch and the environment we are all dependent on protecting.

FOR THE PLANET

Helly Hansen's DNA is intertwined with water. The brand was founded by a sea captain in 1877 on the Norwegian Fjords and to this day provides professional grade gear for use on water and snow around the world. Our love of water has led us to choose water as our leading sustainability effort. Apparel production uses a lot of water and is a major contributor to water pollution. This is why we will focus our research efforts, our engineering developments and consumer awareness campaigns around ensuring water around the world stays as clean as the Norwegian fjords. We are passionate supporters of many other environmental issues and will continue to be proactive participants in improving the overall standards of the Outdoor Industry but within water issues we will be thought leaders, research pioneers and drive awareness of clean water challenges to our consumers and partners across the value chain.

OUR ENVIRONMENTAL FOCUS AREAS ARE BUILT ON 3 MAIN PILLARS WHERE WE FEEL WE CAN HAVE THE BIGGEST IMPACT:

1. EFFICIENT USE OF WATER, CHEMICALS & ENERGY

- Helly Hansen has been prioritizing bluesign® approved materials for over 10 years and today almost 90% of our main fabric is bluesign® approved. Bluesign is an in-put stream management system controlling that only allowed chemistry is applied, as well as it reduces water and energy consumption and air emission on production sites.
- Water consumption has always been a challenge in the textile industry. Here we have been driving change beyond regulations and certifications since the 70's by only using water-free dyeing technologies on our LIFA® base layers. We are now adopting these types of technologies on a larger scale, helping us save even more water than before.

2. TRACEABILITY AND TRANSPARENCY

- We are proud of the close cooperation we have with our suppliers and nominate 100% of the materials used in our garments, down to every detail. We also have a relationship with all our material suppliers (Tier 2) which ensures traceability of all the components we are using.
- Helly Hansen has identified the focus materials and chemicals we use requiring full transparency back in the supply chain. Some of the focus materials and chemicals we use are down, wool, PVC, fluorocarbons and flame-retardant treatments.

3. CLOSED LOOP SYSTEMS

- The biggest favour we can do for the environment is to produce less stuff and instead invest in products with quality and longevity. We don't compromise on quality and want our products to be alive for as long as possible. We have stringent quality controls in the laboratory, in production and via field testing with our ambassadors ensuring products that live up to their expectations and beyond.
- Revitalization of materials and products helps us reduce our environmental impact, makes us invest in research and also help adopting existing solutions and technologies related to closed loop models and materials.

○ 3

3-LAYER SYSTEM

BASELAYER

DRY.

Often referred to as second skin, Helly Hansen base layers are vital to temperature regulation and moisture management in any setting. As you work hard, our LIFA® Technology moves moisture away from the skin, leaving you dry and comfortable. Our current range of base layers are categorized by warmth level, allowing you to select the best fit for your need.

MIDLAYER

WARM.

When faced with colder conditions, Helly Hansen thermal midlayers trap warm air from your body to insulate when you need it most. As you warm up, some of our midlayers can ventilate to expel excess heat and like our base layer range, also allow moisture to pass through, keeping you dry and warm for long days on site. Midlayers should always be selected according to the conditions and activity you're faced with.

PROTECTIVE LAYER

SAFE.

The final component to the 3-layer system is an outer, protective outer layer. Using our award-winning Helly Tech® waterproof membrane, we have been able to create a wide range of durable, protective and seam sealed jackets for all-season use. It is important that the outer layer is also breathable, allowing for proper ventilation and moisture management to combat overheating. Depending on the temperature, the outer layer can protect you from wind, rain or snow, making it a vital piece to any collection.

HELLY HANSEN INTRODUCED THE 3-LAYER SYSTEM TO THE INDUSTRY IN THE EARLY 70S, AND WE'VE BEEN PUSHING IT FORWARD EVER SINCE BY CONSTANTLY IMPLEMENTING NEW TECHNOLOGIES IN OUR GEAR. OUR UNIQUE FLEXIBLE SYSTEM ENABLES YOU TO STAY COMFORTABLE AND PROTECTED WHATEVER WORKING CONDITIONS YOU ARE EXPOSED TO, HEAT OR COLD, RAIN OR SNOW.

WARM. DRY. COMFORTABLE.

Launched in the early 1970s, LIFA® is based on a yarn technology that has been tested and developed over the years. The key functions of LIFA® deliver both moisture management and insulation, moving moisture away from the skin, while transporting perspiration to the surface of the fabric, where it evaporates. In 2006 LIFA® was combined with non mulesed Merino wool to create the best performing base layer to date.

LIFA® is a hydrophobic fiber that prohibits the absorption of liquid. The LIFA® fibers are used on the first membrane layer of base layer garments, the layer nearest to the skin. When the first yarn layer is combined with an additional layer with hydrophilic (moisture absorbing) properties, the sweat from the body is moved away from the skin and transported to the second layer, where it is absorbed. This enables the consumer to stay warm, dry and comfortable.

HOW LIFA® WORKS

LIFA® stay warm technology moves sweat away from your skin, keeping you warmer for longer

LIFA® is an ultra-light weight base layer fabric that works perfectly in the autumn and winter. HH LIFA® delivers light insulation and moisture management through its 100% single layer LIFA® fibers. The LIFA® technology works best when layered under another garment, as the more garments you wear, the further the sweat and moisture will be transported out of the fabric and away from your skin.

STAY WARM
TECHNOLOGY
MOVES SWEAT AWAY

HH
work|wear

WARMER. COOLER. DRIER.

HELLY HANSEN JACKETS WITH THE H²FLOW™ TECHNOLOGY COOLS YOU DOWN 20% FASTER THAN COMPETITOR JACKETS WITHOUT THE TECHNOLOGY, MEASURED ON THE SAME WEIGHT AND INSULATION.

H²Flow™ allows you to control your body's temperature. The technology optimizes insulation, using air pockets or holes that store warmth from the body and, at the same time, allows you to control heat and airflow through ventilation zippers, enabling the cold air to enter and the warm air to exit.

Negative or positive air space is created by adding or subtracting fabric on the inside of the garment to allow this extra air space to be filled with air heated up by the body. In both cases, the purpose is to create pockets of air in strategic areas of the body, trapped in these channels or spaces. The air contained in these pockets heats up from the body heat of the wearer, and keeps you warm.

HOW H²FLOW™ WORKS

Ventilation zippers let cold air in if you get too warm. Air pockets or holes store warmth from your body, so all H²Flow™ jackets have a high warmth to weight ratio.

lifaloft™

INSULATION BY **PRIMALOFT**

LIGHTER. WARMER.

DEVELOPED IN COOPERATION WITH PRIMALOFT®, LIFALOFT™ IS A COMBINATION OF LIFA®'S UNIQUE INSULATION STRUCTURE AND PRIMALOFT®'S EXTENSIVE KNOWLEDGE IN SYNTHETIC INSULATION.

LIGHTER AND STILL WARMER THAN STANDARD INSULATION

With increased warmth, lightweight insulation and superior moisture management properties, LIFALOFT™ technology is an insulation revolution that will keep you warmer with less weight and bulk compared to traditional polyester insulation.

HOW LIFALOFT™ WORKS

The unique hydrophobic properties of the Lifa® fibers deliver moisture management necessary for high endurance activities, whilst the PrimaLoft® structure offers high insulation and breathable performance insulation for all active pursuits.

LIFALOFT™ insulation is based on LIFA® fiber technology that is engineered into a lightweight structure that traps more air than standard polyester, providing extra warmth, the fiber does not absorb water, making the insulation technology ideal for intense activities in variable winter or summer conditions.

TECHNICAL DETAILS

LIFALOFT™'s insulation creates more air pockets, giving more warmth

HYDROPHOBIC

LIFA® fibers have better moisture transportation properties

A better environmental option

HELLY TECH®

WATERPROOF. BREATHABLE.
GUARANTEED.

Helly Tech® is the waterproof and breathable outer layer between you and the elements. Its unique membrane stops water molecules going in, but lets moisture molecules escape. Keeping you dry from the outside and comfortable on the inside.

HOW HELLY TECH® WORKS

1. DWR treated outer fabric is windproof and water-repellent
2. Waterproof and breathable membrane or coating
3. Highly breathable inner fabric, mesh or lining

Helly Tech® is constructed with Polymer Polyurethane (PU) based membranes and coating technologies. The PU membrane gives softness and stretch to the fabric, while the coating allows waterproofness and breathable qualities. Helly Tech® is made either with Hydrophilic barrier membranes or Micro-porous membranes, depending on the end-use purpose of the fabric.

The Hydrophilic barrier works on an osmotic principle, keeping salts from entering and blocking the pores. The Micro-porous PU membranes are hydrophobic- "water hating" polymers. This membrane construction is responsible for the waterproofness of Helly Tech®, making the pores up to 20.000 times smaller than water droplets, while allowing breathability since the pores are up to 700 times larger than a water vapor molecule, allowing the evaporation of sweat and heat.

Helly Tech® is actually more than just a fabric – it is a combination of a DWR-treated outer fabric, a highly breathable and waterproof membrane, fully sealed seams and often a highly breathable inner fabric, mesh or lining.

The seams of the products are taped over with a waterproof ribbon and glue, preventing any water from entering the small gaps between the stitches of the seams.

THERE ARE NUMEROUS TYPES OF HELLY TECH® FABRICS. THE MAIN DIFFERENTIATOR IS THE NUMBER OF PLYS (OR LAYERS) THE FABRIC IS BUILT FROM.

HELLY TECH® PROFESSIONAL

Extremely waterproof and breathable designs and constructions. For highly aerobic, extremely wet or unusually long-lasting activities in extremely harsh conditions.

HELLY TECH® PERFORMANCE

Highly waterproof and extra breathable sport specific designs and constructions. For a wide range of high performance outdoor activities during highly challenging, changing and unpredictable weather conditions.

HELLY TECH® PROTECTION

Fully waterproof, windproof and breathable fabrics and constructions. For all situations and weather conditions where protection from the elements is needed.

3 PLY CONSTRUCTION

Outer fabric + membrane and inner fabric bonded together for lightweight, quick drying and durability.

2,5 PLY CONSTRUCTION

Outer fabric + membrane or coating bonded together with protective print on the inside for extreme lightweight and packability.

2 PLY CONSTRUCTION

Outer fabric + membrane or coating bonded together for breathable waterproofness, protected by inside lining or mesh adding warmth and comfort.

LAB TESTS

WATER COLUMN, ISO 811 and JIS LIS L 1092-B1

Gives the value pressure mm of water held back by fabric. 10.000mm is the same pressure you would experience diving to 10m or equal to the pressure from a fire hose.

BREATHABILITY, JIS L 1099-1985-B1

Gives the value of $g/m^2/24h$ - the amount of water molecules that can pass through 1 square meter of fabric within 24 hours.

15.000 grams breathability equals that a jacket is able to pass 30 litres of water in 24 hours. In comparison, our human body perspires 1 liter per 24 hours.

WATER REPELLENCE, ISO 4920: 1981 and AATCC 35-2006

Spray test: testing of the durable water repellence before and after washing, by drizzling the fabric and measure how many drops that bounce up and if any attaches or wets out the fabric surface.

CARING FOR YOUR HELLY TECH® GARMENTS

TAKING CARE OF YOUR HELLY TECH® GARMENTS ARE VITAL TO THE LIFE OF THE PRODUCT. WASHING THEM WILL REMOVE CONTAMINATING SUBSTANCES SUCH AS OILS, DIRT AND SALT FROM THE SURFACE AND RESTORE THE SURFACE TENSION OF THE FABRIC, ALLOWING THE MEMBRANE TO PERFORM AT ITS BEST FOR YEARS TO COME.

Unsure of when it's time to wash your garment, here are a few signs to look for:

If the water and/or rain droplets no longer bead off the surface of the jacket and start leaving a wet mark, the durable water repellency (DWR) treatment may be worn off or de-activated.

If the breathability does not seem to be on the same level as when you first purchased your Helly Tech® garment, the membrane could be contaminated.

If you need to re-apply a DWR, we recommend doing so after washing and before tumble drying.

HOW TO WASH YOUR HELLY TECH® GARMENT:

1. Make sure you zip up all zippers to avoid any surface damage.
2. Wash your product with warm water as instructed on the care label located on the inside of your garment on the left-hand side in a commercial washing machine.
3. Do not use fabric softener or other detergents that have softening agents, as it will reduce the fabric surface tension and will have a negative effect on the fabric performance.
4. Helly Hansen advises to use a technical washing product and to follow the instructions given by that product. In cases where no technical washing products exist, and you only have the option of normal washing products, Helly Hansen advises to use a liquid washing product with no additives (without perfume, foam or softener).
5. A second rinse cycle with water is preferred to remove any detergents that might be left behind on the surface. It is important to remove excess detergent, as it might affect the performance of the fabric.
6. After washing, you can safely tumble dry your Helly Tech® garment in order to re-activate the DWR treatment. Please always follow the garment care label for drying instructions.

HOW TO RE-APPLY YOUR DWR:

1. Take your garment out of the washing machine and hang it, to allow all excess water to drip off.
2. Make sure all pockets and zippers are closed
3. Read the DWR label from the manufacturer's instructions and spray the DWR across the front and back of the garment, making sure to cover areas of high wear.

HELLY TECH®
PERFORMANCE

LIFE POCKET™

A POCKET ENGINEERED TO PRESERVE YOUR PERSONAL ELECTRONICS' BATTERY LIFE SPAN. SCIENTIFICALLY TESTED AND PROVEN BY ENGINEERS TO EXTEND THE BATTERY LIFE OF YOUR MOBILE PHONE OR ACTION CAMERA IN COLD ENVIRONMENTS. THROUGH THERMAL RESISTANT MATERIALS AND AN INNOVATIVE CONTRUCTION, THE LIFE POCKET™ STAYS 2 TIMES WARMER THAN A REGULAR POCKET.

3M™

Science. Applied to Life.™

3M™ is a pioneer in developing the science behind retroreflection and has been advancing the technology in new and groundbreaking ways for over 70 years. With more than 35 different products, including many high performance options, 3M™ Scotchlite™ Reflective Material offers one of the largest and most diverse portfolios in the industry. It is a trusted name in reflective material technology.

VIZ-LITE®

VizLite DT® uses phosphorescent technology that absorbs UV light energy from natural or artificial light which is then emitted as an "afterglow" in low light or no light conditions.

YKK®

Little parts. Big difference

Little parts, Big difference. High quality zippers for all purposes. YKK® is a Japanese company founded in 1934. Today, their products are sold globally and YKK® is reputed as the industry leader for quality and innovative zippers and closures.

AMANN

Since 1854, AMANN has been one of the leading international manufacturers of high-quality sewing threads, embroidery threads and Smart Yarns.

CORDURA®

Durable. Versatile. Reliable

If It's Made With CORDURA® Fabric, It's Made To Last. CORDURA® fabrics are the perfect combination of durability, versatility and reliability. For more than 40 years, people who love the outdoors have relied on CORDURA® fabrics to be as rugged as they are.

DALETEC

Daletec is the trusted Norwegian producer of protective fabrics providing flame resistant solutions for workwear that protects against heat and flames, electric arc and other workplace hazards. Daletec fabrics are famous for their consistent high quality, comfort, extreme durability, and respected for delivering reliable production and environmentally friendly solutions.

POLARTEC®

The Cornerstone of fleece insulation

We work extensively with Polartec®, a famous manufacturer of lightweight and warm fleece, which is known for performance, durability and aesthetics. Main benefits for using Polartec® are warmth without high additional weight, high breathability, packable and fast drying.

PRIMALOFT®

The world's best down alternative

PrimaLoft® is a synthetic insulation technology, offering superior thermal properties with excellent water repellency. It is made up of ultra-fine fibers that form air pockets to trap heat inside. Additional feature of the ultra-fine fiber is super softness.

COMFORTEMP®

Thermal Insulation

Comfortemp® Thermal Insulation by Freudenberg is a high-performance and sustainable alternative to down. The ultra-soft & lightweight insulation is migration resistant, fast-drying and will not clump when washed. Additionally, the durable insulation offers optimal breathability, ensuring comfortability for extended wear.

BLUESIGN®

bluesign® provides a holistic solution for safe and environmentally friendly textile production, working at each step of the supply chain to ensure that products meet rigorous benchmarks with focus on People, Environment and Resources.

OEKO-TEX®

STANDARD 100 by OEKO-TEX Certified®

The Standard 100 by OEKO-TEX® is a globally standardized, independent testing and certification system for textile raw material, intermediate & end products of all processing stages and accessories materials used. The standard aims at making it obvious to the consumer that the labelled textile products have undergone laboratory testing for a wide range of harmful substances, and that the content of those substances remains below the limit values established by the OEKO-TEX Certified® Association."

CE MARKING

Helly Hansen Workwear's (PPE) products are manufactured and certified in accordance with the Regulation (EU) 2016/425 by using harmonised European standards and therefore are CE marked.

EN ISO 20471:2013+A1:2016

HIGH VISIBILITY CLOTHING

This standard specifies requirements for protective clothing capable of signalling the user's presence visually. The standard intends to provide high visibility of the user under any light conditions by day and under illumination by vehicle headlights in the dark.

There are performance classes defined based on minimum areas of retroreflective and fluorescent materials, as well as garment design requirements. Each of these classes will provide a different level of visibility, class 3 giving the highest degree. The high visibility class can be achieved with a single garment or a garment combination (e.g., jacket + pant).

	Fluorescent material	Reflective material
Class 3	0,80 m ²	0,20 m ²
Class 2	0,50 m ²	0,13 m ²
Class 1	0,14 m ²	0,10 m ²

EN 343:2019

PROTECTIVE CLOTHING PROTECTION AGAINST RAIN

The standard specifies requirements and test methods for the performance of materials, seams, and readymade garments for protection against rain, snowflakes, fog and ground humidity. Resistance to Water Penetration and Water Vapour Resistance is tested.

Value 1 = Resistance to Water Penetration, class 1 - 4 (class 4 is the best waterproofness).

Value 2 = Water Vapour Resistance, class 1 - 4 (class 4 is the highest permeability).

Value 3 = Rain Tower Test (optional test of readymade garment), R.

EN 342:2017

PROTECTIVE CLOTHING PROTECTION AGAINST COLD

The standard specifies test methods and requirements in protective clothing ensembles which are intended to protect against cold (air temperature below -5 °C). The standard is taking into account not only low air temperatures but also humidity and air velocity.

Helly Hansen has tested its products according to method B, which means that the Thermal Insulation has been measured for a garment ensemble (jacket + pant or coveralls) with a base layer. The value is representing protection for a wearer performing light or moderate activity.

The protection can only be guaranteed if the complete ensemble is worn.

Value 1 = Thermal Insulation Value of the Ensemble (with underwear B), I_{cler}

Value 2 = Air Permeability, class 1 - 3 (class 3 is the most permeable)

Value 3 = Water Penetration (optional), WP

EN 14058:2017

PROTECTIVE CLOTHING PROTECTION AGAINST COOL ENVIRONMENTS

This standard specifies requirements and test methods for performance of single garments for protection in cool environment (air temperature above -5 °C). The garment can provide a degree of protection for a certain length of time, depending e.g., on the personal constitution and activity, the accompanying clothing and weather.

Value 1 = Thermal Resistance, class 1 - 4 (class 4 is the warmest)

Value 2 = Air Permeability, class 1 - 3 (class 3 is the most permeable)

Value 3 = Thermal Insulation Value, I_{cler} . Mandatory for class 4. Optional for classes 1 - 3.

Value 4 = Water penetration (optional), WP

IEC 61482-2:2018

PROTECTIVE CLOTHING

PROTECTIVE CLOTHING AGAINST THE THERMAL HAZARDS OF AN ELECTRIC ARC.

This standard specifies methods to test material and garments intended for use in heat- and flame-resistant clothing for workers exposed to electric arcs. Clothing fulfilling this standard ensures that the consequences of workers after the accident, will not be aggravated by the clothing itself.

Under the standard IEC 61482-2:2018 there are two test methods:

- Open Arc Test Method: EN IEC 61482-1-1:2019, measured in cal/cm² and expressed as an arc thermal protection value (ATPV), breakopen threshold energy value (EBT) or the incident energy limit (ELIM). The higher the value, the better the protection.
- Box Test Method: EN IEC 61482-1-2:2014, measured in kA. It is expressed in either APC 1 (4 kA) or APC 2 (7 kA). APC 2 is the higher level of protection.

EN ISO 11611:2015

PROTECTIVE CLOTHING

PROTECTION FOR USE IN WELDING AND ALLIED PROCESSES

This standard specifies minimum basic safety requirements and test methods for protective clothing that are designed to protect the wearers body during welding and allied processes. The standard defines design requirements that would prevent hot/molten materials or sparks getting trapped in pleats, hanging and open pockets or similar. Two-piece garment must be worn together to provide the indicated level of protection.

This type of protective clothing is intended to protect the wearer against spatter (small splashes of molten metal), short contact time with flame, radiant heat from an electric arc used for welding and allied processes.

The standard is divided into two classes:

Class 1:

Provides protection for welding techniques with light formation of spatters and drops, such as TIG or MIG (with low current), with lower levels of radiant heat. The material must withstand at least 15 drops of molten metal.

Class 2:

Provides protection for welding techniques with heavy formation of spatters and drops, such as MAG (with CO₂ or mixed gases) or MIG, with higher levels of radiant heat. The material must withstand at least 25 drops of molten metal.

EN ISO 11612:2015

PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME

This standard specifies performance requirements for garments made from flexible materials, which are designed to protect the wearer's body. Standard is to provide minimum performance requirements for

clothing to protect against heat and flame, which could be worn for a wide range of end uses. Two-piece garment must be worn together to provide the indicated level of protection.

- A = Limited flame spread, A1 or A2 (A1 – surface ignition, A2 – edge ignition)
- B = Convective heat, Level B1 – B3 (B3 is the highest)
- C = Radiant heat, Level C1 – C4 (C4 is the highest)
- D = Molten aluminium splash, Level D1 – D3 (D3 is the highest)
- E = Molten iron splash, Level E1 – E3 (E3 is the highest)
- F = Contact heat, Level F1 – F3 (F3 is the highest)

Garments that are designed to protect against the risk of exposure to molten metal splash by meeting the performance requirements designated by code letters D and E, meet design requirements that would prevent hot/molten materials getting trapped in pleats, hanging and open pockets or similar.

EN ISO 14116:2015

PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME. LIMITED FLAME SPREAD

This standard specifies the performance provide minimum performance requirements for clothing in order to reduce the possibility of the clothing and/or its materials burning when in occasional and brief contact with small flames and thereby, itself constituting a hazard.

The standard is divided into three indexes, where index 3 is the highest.

Garment approved according to index 1 should not be used next to skin and should only be used together with underwear approved according to index 2 or 3.

EN 1149-5:2018

PROTECTIVE CLOTHING

ELECTROSTATIC PROPERTIES.

The standard specifies material and design requirements for electrostatic dissipative protective clothing, used as part of a total earthed system, to avoid incendiary discharges. The requirements may not be sufficient in oxygen enriched flammable atmospheres. The material must meet the requirements set out in EN 1149-1 and/or EN 1149-3.

This European standard is not applicable for protection against high voltages.

EN 13758-2:2003+A1:2006

SOLAR UV PROTECTIVE PROPERTIES

Prolonged exposure of the skin to the sun can produce both short- and long-term skin damage. UVA and UVB radiation can be significantly reduced by proper clothing. The level of protection varies considerably and is dependent on many factors, such as fabric properties and garment design. The protection may be reduced if garment is stretched, wet or sweaty.

RIS-3279-TOM

HIGH VISIBILITY CLOTHING (UNITED KINGDOM ONLY)

Railway industry

This UK Rail Industry high visibility clothing standard specifies requirements for protective clothing that must be worn by staff when on the train lineside or on or near the line. It is designed to make the railway workers easily visible to drivers of approaching trains, allowing enough time to give an early audible warning.

The RIS-3279-TOM:2019 (former GO-RT 3279) standard is based on the European standard EN ISO 20471, and the garments must at minimum meet the requirements of Class 2, based on a classification system from Class 1 to Class 3. While EN 20471 allows use of three different fluorescent background colours: yellow, orange-red and red, RIS-3279-TOM:2019 standard specifies fluorescent orange colour only. Colour requirements are more precise, in order to limit the colour variance to more luminous and more vibrant orange.

HANGING TOOL POCKETS

The Helly Hansen hanging pockets allow you to carry all your necessary tools without the need for an additional toolbelt. Easily detachable or folded into the standard pants pocket when not in use, the hanging pockets provide additional space for small parts, featuring two compartments and a tool strap for added carrying capacity.

The hanging pockets are double lined and feature Cordura® reinforcements for added durability, making them perfect for even the toughest jobs.

EXTENDABLE LEGS

Ensuring a perfect fit for the Helly Hansen Workwear pants is more than just for comfort, it's for safety. If pants are fitted correctly, you minimize the risk of getting caught on something while on site and maximize the life of the products with strategically placed reinforcement fabrics. Additionally, the product will feel more comfortable, as it will enable optimal movement.

Most of Helly Hansen Workwear C-sized and D-sized pants can be extended by unpicking a seam at bottom hem

How to extend the bottom hem of your HH Workwear pants:

1 If your product has the extendable leg feature, you will find 3 threads on the bottom hem, 2 close together at the nearest bottom, 1 thread above the 2 that holds the additional material. These can either be in a contrast color or in a tonal color.

2 From the inside of the pant, rip the top thread carefully, as to not tear the garment

3 Remove the thread completely and pull the hem to reveal the additional material

2-WAY STRETCH VS 4-WAY STRETCH

Stretch can be defined by the possible direction of movement, such as 2-way or 4-way stretch. In a 2-way stretch, the fabric will only move in one direction, crosswise or lengthwise. A 4-way stretch fabric means it can move in both of these directions, allowing for unrestricted movement.

2-WAY MECHANICAL STRETCH

Similarly, stretch can be defined by how the fabric is created. Elastane stretch refers to fabrics where elastane thread is part of the structure and the amount of stretch depends on the percentage of elastin within the fabric. Alternatively, when yarn texture is combined in knitting techniques to create a small amount of stretch in an overall fabric, we refer to this as a mechanical stretch.

480

A woman with her hair tied back, wearing a black Helly Hansen work suit, is focused on working on the hull of a boat. She is leaning over, using a tool to adjust a metal fitting on a large, curved wooden structure. The background shows the interior of a boat with wooden panels and a window. The overall scene is brightly lit, suggesting an outdoor or well-lit indoor environment.

A full-page photograph of a worker in high-visibility yellow and black gear, including a helmet and safety harness, standing on a metal platform. The worker is focused on adjusting a cable car mechanism, which features several pulleys and a red wheel. The background shows a vast, snow-covered mountain range under a clear sky. A white rectangular box is superimposed over the center of the image, containing the text 'HI VIS'.

DIAL IN TO FAST, EFFORTLESS, PRECISION FIT.

AGILITY AND SPEED

The BOA® Fit System enables faster, more powerful directional changes through a seamless connection between equipment and body.

POWER AND PRECISION

Power without compromising precision, the BOA® Fit System delivers more explosive action and unparalleled accuracy.

ENDURANCE AND HEALTH

Go further, faster and stronger. The BOA® Fit System saves energy by improving circulation and efficiency.

DURABILITY AND QUALITY

Engineered with high quality, durable materials, and rigorously field tested, the BOA® Fit System is guaranteed to perform in any environment.

Walk Safe, Work Safe, with Vibram® soles. Tested where it matters

For over 70 years, the unmistakable yellow eight-sided brand, known across the globe, is the symbol of a company that is synonymous with quality, performance, safety, innovation and design. Vibram soles are designed to satisfy the specific requirements of protection at workplaces.

In our Magni Winterboot, we use Vibram FIRE & ICE compound that has been formulated for extreme applications while maintaining its performance values in a wide range of temperatures (from -20C to +250C).

EXTRALIGHT®

XL EXTRALIGHT® INDUSTRIAL PLUS COMPOUND

XL EXTRALIGHT® is a proprietary closed-cell EVA foam that is lightweight, oil resistant, resilient and cushioning.

PERFORMANCE

A COMBINATION OF HIGH PERFORMANCE MATERIALS THAT WORK TOGETHER FOR OPTIMAL CUSHIONING, STABILITY AND ENERGY RETURN

ETPU

CUSHIONING AND ENERGY RETURN WITH EVERY STEP

EVA

LIGHTWEIGHT STRUCTURE AND STABILITY FOR CONSISTENT COMFORT

CE MARKING

All Safety Shoes from Helly Hansen are compliant with CE marking. This means they are produced according to the legal requirements set out in the EU Directives concerning personal protective equipment. Requirements and test methods for safety shoes can be found in **EN ISO 20345:2011**.

Crushed feet, broken bones and loss of toes. Puncture wounds to the feet. Cuts, lacerations and severed toes. Burns. Electric shocks. Sprains and fractures. These are some of the most common injuries that are sustained in a work place when safety footwear is not worn. Therefore more and more countries are introducing mandatory safety footwear regulations to guarantee protection in the workplace. Protective safety footwear is essential to ensure safe and healthy feet. Because of the many potential work hazards, it is important to know which protective category is right for you.

At Helly Hansen we recommend S3, the most extensive protective category within class I.

S3

Footwear that has been certified with S3 can be used in several industry sectors, for example, Light Industry, Heavy Industry, Healthcare, Food processing, Logistics and Delivery, Warehousing, Construction Industry, Engineering and manufacturing, Farming and agriculture, office and administration etc.

Footwear may be used for any end use where one or more of these risks identified on the footwear CE marking label are present but no additional risks are presented by the end use. For category of protection S3 these risks are:

- Where there is a risk of toe crush injuries through falling loads or compressive forces
- Where there is a risk of nails penetrating the sole under the foot
- Where there is a risk of injury caused by fires/explosions by ignition from electrical static sparks and a risk of electric shock from contact with nominal mains voltage is also present or a risk to a third party caused by static discharge such as brillation of the heart
- Where there is a risk of long term injury to the feet, legs and back from repeated physical impacts to the heel
- Where there is a limited risk of water ingress from small splashes over the upper material
- Where the activity requires a fully enclosed heel part to prevent ingress of dirt and debris
- Where a tread pattern is required due to a likelihood of encountering soft ground surfaces
- Where there is a risk of contact of the soles with petrochemicals and similar hydrocarbons

The performance and limitations of use for each protective feature are defined in the European standards EN ISO 20345:2011 and can be found in user instructions enclosed with your footwear.

Safety and occupational footwear are divided into two classes: I and II. Class I indicates that the shoe is made of leather or textile. Class II indicates that the shoe is made of rubber or polymer.

There are various protective categories within these classes. S3 is the highest class within class I and S5 is the highest within class II.

The table below shows which protective properties are present in each category:

CLASS:		I/II	I	I	I	II	II
CATEGORY:		SB	S1	S2	S3	S4	S5
Toe protection	SB	●	●	●	●	●	●
Closed seat region			●	●	●	●	●
Antistatic	A		●	●	●	●	●
Energy absorbing seat region	E		●	●	●	●	●
Fuel oil resistant	FO		●	●	●	●	●
Water resistant upper	WRU			●	●		
Nail penetration protection	P				●		●
Cleated outsole					●		●
Fully rubber or PU						●	●

Additional protective properties may be claimed in conjunction with the above categories, as appropriate:

Protective Properties	Marking code
Resistant to water penetration	WR
Upper is resistant to water penetration	WRU
Metatarsal impact protection	M
Resistance to Inimical environments – Cold insulation	CI
Resistance to Inimical environments – Heat Insulation	HI
Antistatic – Electrical resistance through the outsole	A
Penetration resistant of the outsole complex	P
Energy absorption of the seat region	E
Outsole – Resistant to short term hot contact	HRO
Outsole – Resistant to fuel oil	FO
Slip resistance – Ceramic floor with Sodium lauryl sulphate lubricant	SRA
Slip resistance – Steel floor with glycerol lubricant	SRB
Slip resistance – Footwear meeting both SRA & SRB requirements	SRC

CE ICONS

Slip Resistant Outsole
CE-Marking. Slip Resistance has been tested on Steel Floor with glycerol lubricant and on Ceramic floor with Sodium lauryl sulphate lubricant.

Slip Resistant Outsole
CE-Marking. Slip Resistance has been tested on Ceramic floor with Sodium lauryl sulphate lubricant.

Nitrile Rubber Outsole
Resistant rubber outsole towards oil, fuel and other chemicals

Penetration Resistant Midsole
CE-Marking. Composite Penetration Resistant of the outsole Complex.

AU Toe Cap
CE-Marking. Our lightweight Aluminium Toe Cap that offer protection against impact and compression.

Composite Toe Protection
CE-Marking. Our lightweight Composite Toe Cap that offer protection against impact and compression.

Steel Toe Protection
CE-Marking. Our lightweight Steel Toe Cap that offer protection against impact and compression.

Antistatic Properties
CE-Marking. Electrical resistance through the sole.

ESD
Protection against sudden Electrostatic discharge.

Cold Insulation
CE-marking. Due to its insulating and breathable properties the footwear keeps your feet at a constant temperature, which is perfect for thermal insulation against cold.

TECH ICONS

HELLY TECH® Waterproof
Helly Hansen's proven, waterproof and breathable fabric technology for outerwear now ensures that your feet stay dry and fresh.

PU Half Shell
PU scuff cap which has been injected over the toe together with the sole.

Breathable Mesh
Helps keep your foot fresh all day, with extra breathable mesh fabric

Full Bellows Tongue
The tongue has a full gusset to prevent debris from entering the footwear.

Hellywear Protection
Is a high abrasion TPR/Synthetic material found in all high-wear areas on our shoes. This light-weight, and sturdy application will keep the shoes intact, and your feet well protected against hard and sharp objects for a prolonged period of time.

Support Structure
Re-inforcement structure that keeps the foot stable, and protected, allowing for maximum breathability, while adding minimal amount of weight.

Heel Kicker Support
Structured counter reinforcement, which protects the counter of the footwear from abrasion.

Premium EVA
With its high cushioning properties and light weight, this EVA provides unrivalled comfort and support.

C-Zone PRO
Pod cushioning that absorbs strikes and returns a responsive rebound for true energy return.

Helly Grip
By combining our experience from stormy water and rough outdoor trail, we have come up with a new outsole material that will provide you with the best grip and durability on wet rocks and trails.

Non Marking Sole
The outsole is made out of a non-marking material.

Midfoot Stabilizer
A hard plastic TPU shank that adds durability to the structure of the midsole, and prevents the shoe from twisting through the gait-cycle.

High Visibility
Reflective material trims, for visibility.

Metal-Free
Free from components that can be detected in a metal detector.

Womens Sizes
This footwear comes in womens sizes.
